METRIC DIMENSIONAL ANALYSIS Practice 2
From http://www2.hoover.k12.al.us/schools/hhs/faculty/skelley/Unit\ 1/DIMENSIONAL\ ANALYSIS\ Practice\ 1\ and\ 2.pdf
Show all of the following unit conversion problems using the factor label method (dimensional analysis). Set up the problems clearly, round answers to correct significant digits and all answers must have units.

Cubed Units: $\mathbf{1 m L}=1 \mathrm{~cm}^{3}$ and $\mathbf{1 L}=1 \mathrm{dm}^{3}$

1. How many cubic meters $\left(\mathrm{m}^{3}\right)$ are there in 4862 cubic centimeters $\left(\mathrm{cm}^{3}\right)$ ?
2. How many cubic decimeters $\left(\mathrm{dm}^{3}\right)$ are there in $1.853 \times 10^{4}$ cubic meters $\left(\mathrm{m}^{3}\right)$ ?
3. Calculate the number of cubic centimeters $\left(\mathrm{cm}^{3}\right)$ in 18 cubic meters $\left(\mathrm{m}^{3}\right)$.
4. How many cubic kilometers $\left(\mathrm{km}^{3}\right)$ are there in $4.275 \times 10^{5}$ cubic meters $\left(\mathrm{m}^{3}\right)$ ?
5. The volume of a sample of water is found to be 186.3 cubic centimeters $\left(\mathrm{cm}^{3}\right)$. What is the volume of the sample in cubic millimeters $\left(\mathrm{mm}^{3}\right)$ ?

## Volume

1. Convert $15.9 \mathrm{~cm}^{3}$ to L . Remember, $1 \mathrm{~mL}=1 \mathrm{~cm}^{3}$ and $1 \mathrm{~L}=1 \mathrm{dm}^{3}$
2. Convert 555 deciliters (dL) to $\mathrm{dm}^{3}$.
3. Convert $3.5 \mathrm{dm}^{3}$ to mL .
4. Convert 49 L to $\mathrm{cm}^{3}$.

## Derived Units

1. Convert $57 \mathrm{~g} / \mathrm{cm}^{3}$ to $\mathrm{kg} / \mathrm{dm}^{3}$.
2. Convert $17.6 \mathrm{~m} / \mathrm{s}$ to $\mathrm{cm} / \mathrm{s}$
3. Convert $98.5 \mathrm{~km} / \mathrm{hr}$ to $\mathrm{m} / \mathrm{s}$.

## Density = mass/volume

1. What is the volume, in milliliters, of a sample of helium that has a mass of $1.53 \times 10^{-3} \mathrm{~g}$, given that the density is $0.17847 \mathrm{~g} / \mathrm{L}$ ?
2. What is the volume, in decimeters, of a sample of helium that has a mass of $1.93 \times 10^{-2} \mathrm{~g}$, given that the density is $0.17847 \mathrm{~g} / \mathrm{L}$ ?
3. What is the mass, in grams, of a sample of helium that has a volume of $2.4 \times 10^{2} \mathrm{~mL}$, given that the density is $0.17847 \mathrm{~g} / \mathrm{L}$ ?
4. Calculate the volume of a sample of aluminum that has a mass of 7.083 kg . The density of aluminum is $2.70 \mathrm{~g} / \mathrm{cm}^{3}$.
