

# Water Table

Seepage of water from the water table:

- \*keeps streams flowing between rains
- \*maintains water level of swamps, lakes
- \*supplies drinking water to springs, wells

Water table depth changes due to:

- \*seasons
- \*amount of rainfall
- \*slope of ground
- \*climate

During severe drought, water table drops, causing lakes & swamps to dry up, wells to go dry, etc.
